Strong system with sleek lines

The WICLINE 75 TOP aluminium window system

With WICLINE 75 TOP, fabricators, architects and planners benefit from the flexible aluminium window system with 75 mm module depth – combined with outstanding thermal performance to passive house standard.

Due to the tried-and-tested shape with 75-mm module depth, the use of the innovative WICONA window system is possible without changing the planning and production process. Due to the clever material mix which, for example, removes the need for insulation inserts, valuable resources can be saved in purchasing as well as in installation.

WICLINE 75 TOP is a promising process-safe and production-friendly window system for projects that are demanding both in terms of energy efficiency and architecture.

Be the first to benefit from genuine innovation.

Once again, WICONA proves its innovative leadership by being one of the first European aluminium system house to introduce a window system combining a slim module depth of 75 mm with U_w levels below $0.80 \text{ W}/(\text{m}^2\text{K})^*$.

TOP – three letters are decisive:

- T** = High Thermal insulation
- O** = Optimum performance and workmanship
- P** = Passive house standard

Thus, WICLINE 75 TOP is one of the first aluminium window system with a module depth of only 75 mm and thermal performance to passive house standard. With this window systems, WICONA partners can take on a flexible and innovative product with first-class energy efficiency into their range – without having to plan in additional expenses for purchasing, production and installation.

* 1230 x 1480 mm (W x H) window, triple glazing with plastic spacers

WICLINE 75 TOP – the first window system with ETC Intelligence®

Energy efficiency redefined

Due to the patented ETC Intelligence® thermal break zone, window applications can be achieved with a window frame depth of only 75 mm to passive house standard. Conventional insulation inserts are no longer needed for most applications. Rather, the outstanding energy efficiency is achieved by an innovative and intelligent mix of materials in the thermal zone of the system.

Sections with ETC Intelligence® withstand high temperatures over several minutes. This allows powder-coating or anodising of the rolled-together profile.

ETC Intelligence® – a unique innovation:

- Low **e**mission film reflects the radiated heat effectively
- Low **t**ransmission thermal break material reduces heat conduction in the section
- Low **c**onvection thermal break fins minimise heat losses through convection

With this technology, the outstanding thermal performance that used to be the reserve of systems with a module depth of 90 mm is now possible for 75-mm window systems too.

WICLINE 75 TOP – Your advantages at a glance

Benefit from the outstanding aluminium window system with 75-mm module depth and U_w levels to passive house standard – without conventional insulating inserts.

No adaptations to the machine stock is required

Minimum purchasing expenses for new tooling

Save costs in purchasing and in installation

Simplified production due to the reduced use of insulation inserts
